

# The Protector HybridPro

Duplex AC Pump performance and efficiency, whether there's power or not

## Protector HybridPro Sump Pump System

### Product Summary

Without your sump pump, ground water would flood your basement. Power outages and pump failures are the reason many people install a battery backup sump pump system. These systems run the gamut from cheap hardware store versions to high end diagnostic and notification systems, such as our Protector ePump Series. But what if you wanted to utilize electric sump pumps instead of DC powered pumps? Enter The Protector HybridPro, the world's first AC/DC, efficient, self-testing, dual sump pump system. Unlike a standard inverter, the HybridPro inverts power more efficiently to provide extended backup running time from the batteries. Use of the recommended Protector EcoPower sump pumps extends run time even longer!

### Specifications:

- The world's first SELF-TESTING, ultra-efficient AC/DC dual sump pump system. Lasts nearly 4 days without power\*.
- Heavy Duty Control Unit. Is capable of running sump pumps off of regular AC house current OR off of two large batteries through its high efficiency inverter during power outage. Tests pumps daily and can alternate pumps 3:1 or 4:1. Provides alerts for pump, battery, and power failures. Quiet operation. Automatically maintains batteries at optimal level.
- LED's, battery voltmeter, and an audible alarm indicating operating mode and system status.
- 2 Heavy Duty Maintenance Free Batteries. Large batteries will provide 4 days of running time.
- 2 Protector EcoPower sump pumps. Dual redundant pumps provide protection from mechanical failure. Higher pumping capacities than other pumps. Ultra efficient motors mean longer running times during power outage.
- 2 Battery boxes
- 2 year warranty on complete system!

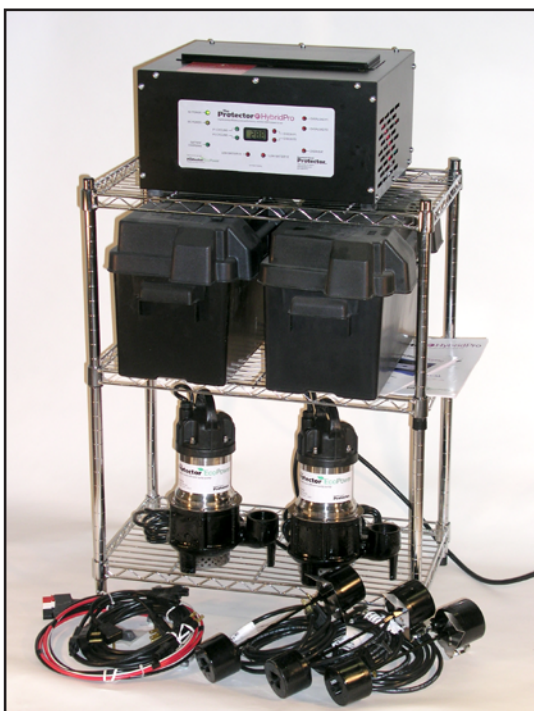

\* Cycling once every 1/2 hour, using The Protector EcoPower sump pumps.

### Features:

- 40 pounds of pumps: Dual Protector EcoPower electric cast iron/stainless steel pumps. Heavy duty power, yet efficient. Longest lasting pumps.
- 50 pounds of computer: Alternates pumps. Self-tests pumps and batteries every day. Alarms for found errors, including high water. No more floods from unknown pump failure!
- 150 pounds of batteries: Maintenance Free. No more checking water level in batteries.
- 240 pounds of equipment. 1,000,000 pounds of flood protection.

**When BFP provides installation, the following is also provided:**

- Equipment rack
- New interior discharge piping
- New quiet check valves
- New poly pit cover
